

JOSEPH DZANJA

SOFTWARE DEVELOPER | FULL-STACK & ENTERPRISE APPLICATIONS

Blantyre, Malawi · +265 887 365 579 · jhdzanja@gmail.com · LinkedIn: [Joseph Dzanja](#)

PROFESSIONAL SUMMARY

Software Developer with professional experience designing and developing full-stack business applications, with a particular focus on frontend development, API integration, backend services, and database-driven systems. Experienced in building operational software including help desk, livestock management, transport management, and university web applications. Strong experience translating business requirements into practical application features and connecting frontend interfaces with backend services, databases, authentication, and role-based access control. Comfortable working across the application stack and contributing to system architecture, testing, and feature design.

Core technologies: Next.js, React, TypeScript, Python, FastAPI, C#, Node.js, Vue.js, PostgreSQL, MySQL, and Flutter.

PROFESSIONAL EXPERIENCE

Software Developer

Mitra Systems Limited — Blantyre, Malawi | June 2025 – Present

- Develop full-stack enterprise applications across frontend, backend, database, and API layers.
- Lead frontend development for a Help Desk Management System, including ticket management, agent administration, assignment workflows, authentication, and knowledge-base functionality.
- Develop and maintain a cross-platform HR mobile application with features for attendance tracking, task management, leave requests, and related employee workflows.
- Develop and integrate application features using Next.js, FastAPI, Python, C#, and PostgreSQL.
- Participate in software architecture and feature design to support maintainable and reliable applications.
- Conduct software testing and User Acceptance Testing (UAT) to validate system functionality and quality.
- Collaborate with development teams to translate operational requirements into practical software features.
- Support project coordination through task management, development planning, and collaboration across teams.

Web Application Developer — Contract

Jumpha Poultry Hub | November 2024 – June 2025

- Designed and developed a full-stack livestock management application supporting operational workflows and feed calculations.
- Translated business requirements into user interfaces and application workflows.
- Developed responsive frontend components using Vue.js, Tailwind CSS, and HTML/CSS.
- Built backend services and REST APIs using Node.js and Express.
- Designed and managed relational data models using MySQL and Sequelize.
- Integrated frontend applications with backend services to deliver end-to-end functionality.

Software Developer — Volunteer

Lilongwe University of Agriculture and Natural Resources (LUANAR) | February 2024 – May 2025

- Contributed to the development and maintenance of the LUANAR website and internal software systems.
- Developed features for a web-based transport booking application supporting internal scheduling and logistics.
- Implemented responsive interfaces with a focus on usability across devices.
- Provided technical support and user training for university staff and users.
- Supported installation and configuration of network infrastructure, including switches, network sockets, cabling, and equipment cabinets.

Research Assistant

Agriculture Commercialization Project of Malawi (AGCOM) | June 2024 – July 2024

- Conducted data collection and analysis to support project research objectives.

SELECTED PROJECTS

Help Desk Management System

Mitra Systems Limited |

Enterprise help desk platform supporting ticket management, agent workflows, authentication, permissions, and user self-service.

- Led frontend development across major application modules.
- Designed and implemented interfaces for ticket management, agent management, assignment workflows, and authentication.
- Integrated frontend functionality with backend APIs to support the complete ticket lifecycle.
- Contributed to role-based access control, permissions management, and database model design.
- Developed knowledge-base and article management functionality to support user self-service.
- Participated in feature and system design to support a maintainable application architecture.

Jumpha Poultry Management System

Jumpha Poultry Hub |

Full-stack livestock management application developed to support operational management and feed calculations.

- Designed application workflows and user interfaces based on operational requirements.
- Developed responsive frontend interfaces using Vue.js and Tailwind CSS.
- Built backend services and APIs using Node.js and Express.
- Designed and managed relational databases using MySQL and Sequelize.
- Integrated frontend and backend components to deliver complete application functionality.

HR Mobile Application

Mitra Systems Limited |

Cross-platform mobile application developed to support human resource management and employee workflows.

- Developed mobile interfaces for employee attendance tracking and daily activity management.
- Implemented task management features to allow employees to view and manage assigned tasks.
- Designed responsive, user-friendly screens to support common HR activities across mobile devices.

LUANAR Website

Lilongwe University of Agriculture and Natural Resources |

- Contributed to frontend development and maintenance of the university's official website.
- Implemented website features and supported ongoing improvements to system functionality.

TECHNICAL SKILLS

Programming Languages: Python, C#, JavaScript, TypeScript, PHP, Dart

Frontend and Mobile Development: Next.js, React, Flutter, Vue.js, HTML, CSS, Tailwind CSS, Responsive Design

Backend Development: FastAPI, Node.js, Express.js, REST APIs

Databases: PostgreSQL, MySQL, Sequelize, Database Design

Application Development: API Integration, Authentication, Role-Based Access Control, Database Design, Software Architecture, Requirements Analysis, Software Testing, UAT

UI/UX: User Flow Design, Wireframing, Responsive Design, Usability Principles, Accessibility Basics

Tools & Other: Git, Figma, Microsoft Excel

EDUCATION

Bachelor of Science in Computer Systems and Security

Malawi University of Science and Technology (MUST) | October 2019 – October 2024

Grade: Distinction

Malawi School Certificate of Education

Kings Foundation Private School | September 2016 – July 2018

Grade: 13 Points

CERTIFICATIONS

Certified Ethical Hacker (CEH) — EC-Council · 2026
